**A Smarter Way to Use Sunlight: Array Pushes Solar Deep into Buildings**

A pair of University of Cincinnati researchers want you to see the light – even if you're in an unlit, interior, windowless room. The new technology, called SmartLight, involves a narrow grid of tiny, electrofluidic cells self-powered by embedded photovoltaics and applied near the top of a window. These open-air "ducts" help sunlight to illuminate windowless work spaces deep inside office buildings. The grid can be applied to any building – big or small, old or new, residential or commercial – and the excess energy can be harnessed, stored and directed to other applications. "The SmartLight technology would be groundbreaking. It would be game-changing," said Anton Harfmann, an associate professor in UC's School of Architecture and Interior Design. "This would change the equation for energy. It would change the way buildings are designed and renovated. It would change the way we would use energy and deal with the reality of the sun. It has all sorts of benefits and implications that I don't think we've even begun to touch."

**Geodesy Applications Pursued for Atom Optics**

An atom interferometer under development at NASA to measure gravitational ripples in space-time with picometer-level sensitivity could also advance geodesy, the science of measuring the Earth's size, shape and gravitational field.

**Power Technology's iMAT® DPSS Laser Platform Ideal for Raman Spectroscopy**

Power Technology, Inc.

Power Technology's iMAT® series of DPSS lasers are inherently beneficial to the Raman Spectroscopy industry because of its patented technology which inherently produces actively stabilized single frequency wavelengths at 532 nm and 1064 nm. This revolutionary technology earned international recognition by winning the Frost & Sullivan European Diode-Pumped Solid State Laser Technology Innovation of the Year award in 2009.

**EPIC Workshop on Biophotonics - November 27 - 28, 2013 · Maastricht University Medical Center, The Netherlands**

EPIC, the industry association promoting the sustainable development of organizations working in photonics in Europe, will hold the workshop "Unmet Healthcare Needs as Opportunities for Technologies" Nov. 27 and 28 in Maastricht, Netherlands. The conference is divided into four sessions. Session 1, "Setting the Scene - Introductory Presentations," will include discussions on the technology and business landscape, developing new ways to fund biophotonics devices, and the regulatory environment for medical devices. Session 2 covers "Electronics & Optics for Point-of-Care Devices for Chronic and Infectious Diseases," while Session 3 encompasses "Photonics Components for Medical Imaging & Microscopy" and Session 4 pertains to "Unmet Health Care Needs as opportunities for Photonics Technologies."
