SPIE Optics + Photonics 2023

SPIE Optics + Photonics to Host Industry Leaders, Discuss the Best in Tech

SPIE’s Day-One Optics + Photonics trade show and exhibition will return to the San Diego Convention Center Aug. 20, with the conference running from Aug. 22-29. Attendees can expect over 2000 presentations in a multitude of photonics-related fields and industries. The conference will cover topics in near infrared techniques, with plenary talks, technical presentations, and a poster session featuring professional development opportunities and an early start for all.

New Exhibitors

Optics and Photonics Industry

The Langmuir-Blodgett Film Tech is now ready to show off its cutting-edge technology by demonstrating its recently developed, high-speed wettability control technology. The company’s wettability control technology is designed to improve the performance of thin films and coatings in various industries, including electronics, food packaging, and healthcare. The company’s technology is capable of controlling the wettability of surfaces at the molecular level, allowing for precise control of the interaction between liquid and solid surfaces. Attendees can expect to see the company’s technology in action and learn more about its potential applications in various industries.

Nanoparticle Laser Technology

NanoPulse Technologies, Inc. will be showcasing its latest laser technology at this year’s conference. The company’s laser systems are designed to provide ultrafast, high-precision nanoscale manipulation of particles and materials. The company’s technology is ideal for applications in materials science, nanotechnology, and biotechnology. Attendees can expect to see the company’s latest laser system in action and learn more about its capabilities and potential applications in various fields.

Optical Engineering + Manufacturing

Optical Systems can be customized to meet the needs of any application. The company’s optical systems are designed to provide high-performance results, from the most basic to the most complex. The company’s optical systems are designed to meet the needs of any application, from the most basic to the most complex. The company’s optical systems are designed to meet the needs of any application, from the most basic to the most complex. The company’s optical systems are designed to meet the needs of any application, from the most basic to the most complex. The company’s optical systems are designed to meet the needs of any application, from the most basic to the most complex. The company’s optical systems are designed to meet the needs of any application, from the most basic to the most complex.
