Next Generation 3D Printing: The Emergence of Enabling Materials

Wednesday, November 15, 2017 10:00 AM - 11:00 AM EST

About This Webinar

In this webinar, KIT principal investigator Bastian Rapp, Ph.D., will introduce his lab's prototype and process for enabling freeform generation of highly transparent fused silica glass components using 3D printers. Rapp will discuss potential applications for 3D printed glass, ranging from 3D printing of complex lenses for smartphone cameras and next-generation microprocessors to intricate glass panels for use in building construction.

While additive manufacturing and 3D printing have seen significant improvements in processing and instrumentation, the choice of materials for use in AM and 3D printing has not increased significantly. As a material for use in 3D printing, glass has numerous advantages, including unmatched optical properties and high degrees of mechanical, thermal and chemical stability. Rapp will discuss how the emergence of enabling materials for 3D printing could revolutionize use of this technology.

Bastian E. Rapp studied mechanical engineering at the University of Karlsruhe (KIT) and received his Ph.D. from the university in 2008, working on biosensors for biomedical diagnostics. He is a principal investigator and head of NeptunLab at the Institute of Microstructure Technology at KIT. His research focuses on the development of microfluidic analytical systems and instrumentation for biomedical applications and biotechnology. His work has been published in the publications Lab-on-a-Chip, Advanced Materials, Angewandte Chemie and Nature.

Mark Your Calendar

Date: Wednesday, November 15, 2017

Time: 10:00 AM - 11:00 AM EST

Space is limited. Reserve your Webinar seat now at: <https://attendee.gotowebinar.com/register/7457665597824067074>

After registering you will receive a confirmation email containing information about joining the Webinar.

SYSTEM REQUIREMENTS

PC-based attendees

Required: Windows® 10, 8, 7, Vista, XP or 2003 Server

Mac® -based attendees

Required: Mac OS® X 10.6 or newer

Mobile attendees

Required: iPhone®, iPad®, Android™ phone or tablet, Windows 8 or Windows Phone 8

More from Photonics Media

Upcoming Webinars

- Making Laser-Based Dermatologic Procedures Safer and More Effective, 11/2/2017 1:00:00 PM EDT
- Practical Solutions for Laser Safety, 11/14/2017 12:00:00 PM EST
- PBM 101: Photobiomodulation Basics, 1/9/2018 1:00:00 PM EST

Archived Webinars

- Laser-Induced Damage Threshold Values and How They Impact You
- 3D Electromagnetic Simulation of Photonic Devices
- Learn Efficient Luminaire Design Using Virtual Prototyping
