Presented by

.: About This Webinar

LED illumination for fluorescence microscopy systems has progressed significantly from a time when LED sources had low optical power and a limited range of wavelengths. While the benefits of LED technology drew interest, the limitations prevented large-scale adoption. Advances in the semiconductor industry have now been able to eliminate many of the fundamental hurdles that were previously faced.

Today, LED technology is rapidly replacing the lamps that were used in microscopy and fluorescence imaging, including in applications on the extreme ends of the light microscopy spectrum. Xenon lamps have traditionally been relied on by applications that require a light source with uniform spectral stability across the near-UV to visible spectrum. These lamps allow the user to switch filters while maintaining consistent excitation power between wavelengths, which is crucial for quantitative studies.

Kavita Aswani, Ph.D. describes the latest advances in illumination for fluorescence imaging, from near-UV to NIR fluorophores. New LED illumination systems are successfully replacing traditional arc lamps in calcium imaging applications. These systems are producing equivalent results with the convenience of LEDs. IR versions of the light sources allow imaging of the popular ICG (indocyanine green) and IR800 dyes. They also provide high signal-to-noise ratios due to the low background in the NIR region. The NIR wavelengths allow for greater depth penetration in thick tissues and living animals. An example of these new systems is the X-Cite NOVEM™ system, which was awarded the prestigious 2021 Microscopy Today Innovation Award.

Who should attend:

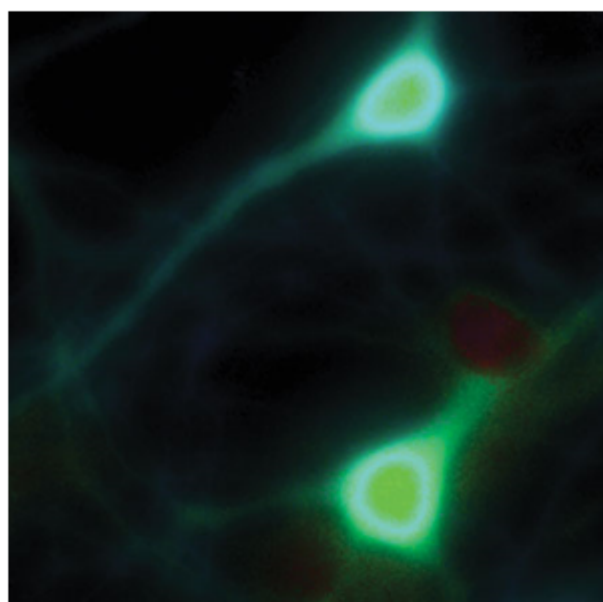

Researchers and engineers working with or interested in illumination for fluorescence imaging. Those working in test & measurement, imaging, microscopy, and spectroscopy, in industries such as biophotonics, cancer research, medical, and pharmaceutical.

About the presenter:

Kavita Aswani, Ph.D. is Senior BioMedical Applications Scientist at Excelitas Technologies. She has a doctorate from the University of Iowa and has seven years of scientific research experience and over 20 years of applications experience in the microscopy and fluorescence industry. Aswani has authored and reviewed several publications, as well as journal articles. She has worked in the areas of wide-field illumination microscopy, laser scanning microscopy, and flow cytometry. She is an active member of the Society for Neuroscience and the Royal Microscopical Society.

About Excelitas Technologies Corp.:

Excelitas Technologies® Corp. is a leading industrial technology manufacturer focused on delivering innovative, market-driven photonic solutions to meet the illumination, optical, optronic, imaging, sensing, and detection needs of our global OEM and end user customers. Recognized as the industry standard in fluorescence microscopy, the company's X-Cite fluorescence illuminators include a complete range of lamp and LED light sources offering maximum stability and superior illumination uniformity to optimize imaging and ensure greater data reliability.

.: Mark Your Calendar

Date: Thursday, June 2, 2022

Time: 10:00 AM - 11:00 AM EDT

Space is limited. Reserve your Webinar seat now at: <https://attendee.gotowebinar.com/register/144021052484113932?source=Eblast>

After registering you will receive a confirmation email containing information about joining the Webinar.

SYSTEM REQUIREMENTS

Operating System

Windows® 7 or later, Mac OS® X 10.9 or later, Linux®, Google Chrome™ OS
Android™ OS 5 or later, iOS® 10 or later

Web Browser

Google Chrome™ (most recent 2 versions)
Mozilla Firefox® (most recent 2 versions)

Mobile Devices

Android™ 5 or later
iPhone® 4S or later
iPad® 2 or later
Windows Phone® 8+, Windows® 8RT+

.: More from Photonics Media

Upcoming Webinars

- Measuring Long-Wavelength Lasers with IR Cameras, Pyroelectric Scanning-Slit Sensors, and Wavelength Conversion Apparatus, 6/7/2022 1:00:00 PM EDT

Archived Webinars

- Expanding Implementation of Fast Optimization Technology for Photonics, Optics, and Quantum Manufacturing Applications
- Achieving Ultralow-Loss Photonics Array Alignment
- How to Deploy and Scale Production-Ready Deep Learning in Manufacturing

Don't miss out!
