### CMOS-Integrated Nanophotonics Technologies for Short-Reach Communications Links

Join us for a Webinar on Thu, Jan 28, 2016 1:00P EST

CMOS-integrated nanophotonics (CINP) has the potential to bring traditional semiconductor industry efficiency and low-cost manufacturing to single-mode, short-reach (<2 km) optical interconnect applications, such as for data centers and advanced computing systems.

Technical solutions available for short-reach optical communications links that incorporate CINP range from a strictly hybrid approach, where the photonic and electronic elements of the transceivers are fabricated in different technologies and bonded together, to monolithically integrated solutions, where the photonic and electronic elements are on a single chip.

This webinar will provide an overview of monolithic front-end-integrated electronic/nanophotonic CMOS technology that has been developed at IBM for single-mode optical short-reach transceivers at data rates up to 25 Gb/s.

Presenter Douglas Gill is a research staff member at IBM's T.J. Watson Research Center in Yorktown Heights, N.Y., where he works on electro-optic systems monolithically integrated within CMOS electronics.

#### MARK YOUR CALENDAR

**Date:** Thu, Jan 28, 2016

**Time:** 1:00P EST

**Space is limited.** Reserve your Webinar seat now at:  
<https://attendee.gotowebinar.com/register/8700221477361537026>

After registering you will receive a confirmation email containing information about joining the Webinar.

#### SYSTEM REQUIREMENTS

PC-based attendees  
Required: Windows® 8, 7, Vista, XP or 2003 Server

Mac®-based attendees  
Required: Mac OS® X 10.6 or newer

Mobile attendees  
Required: iPhone®, iPad®, Android™ phone or tablet, Windows 8 or Windows Phone 8

Visit Photonics Media to watch past webinars on demand to learn more about the latest developments in lasers, imaging, optics, biophotonics, machine vision, spectroscopy, microscopy, photovoltaics and more.
