Five Signs that a Photometry-Based Imaging System is the Right Choice for Your Inspection Application

Photometric imaging solutions bridge the gap between machine vision systems and true human vision, offering consistent, quantifiable data for automated processes that matches the visual acuity of human inspectors. Learn the limitations of standard machine vision as compared to photometry-based systems, and capabilities of photometric imaging—using specifications for light measurement—when employed for complex inspection. The five indicators outlined in this paper are intended to help readers understand the benefits of alternative visual inspection systems.
