## The VisIR-765 "STED" - A Versatile Picosecond Pulsed Laser Module for Spectroscopy and Microscopy

Studying luminescence lifetime is a very powerful analytical tool, as it provides insights into the excited state dynamics of molecules, complexes, or semi-conductors. Pulsed laser modules with temporal pulse widths in the range of tens to a few hundred ps and easy selection of pulse repetition rates are required for measuring fluorescence lifetimes. We highlight here the modules from PicoQuant's VisIR/VisUV laser platform and what makes them ideal excitation sources for such applications.
