### Benefits of Client-Server Systems for Quality Control with Vis-NIR Spectroscopy

Nicolas Röhl

Analyzer systems monitoring product quality can offer substantial advantages when organized in a client-server network compared to the more traditional local installation. This white paper presents different client-server setups and their benefits. Security aspects that need to be considered are discussed based on the example of the client-server Vis-NIR (visible near-infrared) spectroscopy software Vision Air, widely used for quality control in the chemical, polymer, pharmaceutical, and petrochemical industry.

Metrohm International Headquarters, Berlin, Germany
