WHITE PAPERS & APPLICATION NOTES

PI

How to Improve Active Photonics Alignment Performance

Speed and precision are paramount to photonics alignment. For Silicon Photonics assembly & test applications such as wafer probing, alignment time is the primary cost driver, especially in production probers. With their advanced autonomous alignment functionality and fab-qualified mechanics, PI photonics alignment subsystems and award-winning algorithms, have enabled industry success. Make sure to visit PI's booth at Photonics West for a peek at the next generation of alignment engines.
