

biomedical illumination system

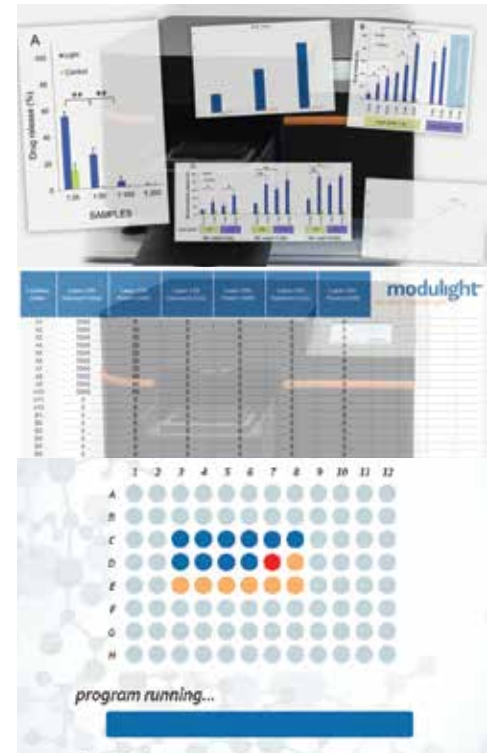

Accurate reproducible illumination

ML8500 automatic illumination kit works seamlessly with Modulight's ML7710 biomedical laser or optional internal ML6xxx series lasers. Operating the illumination kit is very easy with an intuitive touch-screen interface and a programming through simple Excel® spreadsheet.

ML8500 is a great tool for sequential illumination of multi-well sample plates and optional fluorescence imaging/measurement. Fully automatic system takes care of the rest.

Typical applications

- Cardiotoxicity testing
- Optogenetics
- Ophthalmic oncology
- Other biomedical illumination
