

PT Fiberoptics

ST COMPATIBLE CONNECTOR PRODUCTS

1. CONNECTORS
1. MATING ADAPTERS

The PT Fiberoptics ST style product line offers high performance, easy field mountability, durability and compatibility with all connectors that adhere to the AT&T ST standard.

The PT ST compatible connector design is a bayonet keyed connector providing high repeatability. Its ceramic ferrule with a pre - radiused end finish assures improved reflection characteristics and facilitates fast polishing of a fiber.

The ST Series includes single mode and multimode connectors.

Connector - to - connector mating is achieved by using a bulkhead feed - through adapter. The single mode mating adapter combines a metal housing and a precision ceramic alignment split sleeve. The multimode mating adapter is completed with a bronze alignment split sleeve.

All versions of the PT Fiberoptics ST compatible connector products are designed and manufactured using the most advanced ceramic and metal material technologies.

The ST Series connectors have an industry standard .178"/.151" hex crimp.
